#### PHARMACY COMPLETE

## Negotiations With University Succeed

What is regarded as a triumph for the pharmaceutical profession is the gaining of a complete composite four-year course for pharmacy students at the Adelaide University, leading to the examinations for the diploma of the Pharmacy Board.

Negotiations which had been proceeding for several months were completed yesterday when the course was approved by representatives of Adelaide University and the Pharmacy Board.

sity. The new scheme, if approved by the for the inclusion in the curriculum of such council of the Pharmaceutical Society at its a specialised subject as drug assaying. meeting on Thursday, February 6, will give The case for the pharmacists was put the consent of the council it will operate Lipsham, D. D. Magarey, and O. H. Wal for students this year.

#### PHARMACY DIPLOMA

A complete pharmacy course at the University has Adelaide authorised. Certain subjects required for the diploma issued by the Pharmacy Board have been taught at the University in the past, but, as the result of negotiations between the board and the University, a complete four-year course has now been provided. The scheme still requires the approval of the council of the Pharmaceutical Society, which will meet on Thursday The course will be controlled by the Pharmaceutical Society and a tentative curriculum has been drawn up. It is probable that the chemistry subjects will be taken by Professor A. Killen McBeth, botany by Dr. Griffiths Davies of the Waite Institute, and pharmacy and materia medica by the president of the Pharmaceutical Society (Mr. E. F. Gryst).

### Research Worker and Faithful Friend

As one would naturally expect, the loss of so brilliant a scholar and scientific worker as Professor Brailsford Robertson has been deplored by all sections of the community on whose behalf he laboured. The death of such a man, so gifted, and devoting his great gifts so wholeheartedly to the service was the intention of the Waite Research of his fellows, is a national calamity authorities to investigate the matter Australia could better have spared al-thoroughly. most any dozen of her politicians than

tempt for our politicians, holding them, forward with some cagerness, and for the most part, to be honest men, which now can never be realized; but honestly seeking to do the best they I feel that in his all too early death can for this country, according to their Australia, and the primary producers lights and so far as their party affili- of this country in particular, have sufations will permit. But the average fered an irreparable loss. man evolved by our political party ma. chines is not usually of a conspicuously higher type than that of the average of the community he represents, and tends to become less and less conspicuously so.

In the realms of thought, however and perhaps to-day more than in the past, particularly in the realms, of scientific thought, high quality brains are still a requisite for leadership. And thought, by its very nature, must be independent, untrammeled by party afilliations, and free to take its course without directions from a party machine controlled from below by a mass of men ignorant of science and untrained in habits either of thought or of research.

What the priest was to the world in the Age of Faith the research scientist has largely become to the present age. In Russia it would appear that an attempt is being deliberately made to replace the spiritual guides of the nation wholly by the scientific worker; and Professor ii. Davies there is at least one other great nation in which, though the churches nomin- ing his last trip abroad.
