

4 November 1943

My dear Atkins,

Thanks for your long and interesting letter. If you care to send me the two series, they do not sound too extensive for me to get the test done in spare time. There are only about 43 subjects, but perhaps there have been a succession of ^{urine-}tests on each. Anyway, let me have a copy of the protocols, or at least the earliest stage you want me to deal with, and I will see what can be done, with pleasure.

Yours sincerely,
