

22nd February, 1951.

My dear Cyril,

I am sending herewith a paper by Hutchinson, which I think is quite excellent and which he wishes to publish in Heredity. He seems to have arranged his tables and map with the intention that these should appear after the completed text. I think this arrangement is a little hard on the reader, but as the tables are extensive I imagine that is how they must go. However, do as you think fit.

I also enclose Barigozzi's paper which I ~~have~~ just received from Kenneth Mather and seems obviously acceptable, unless we tell him to re-write it for English. I am not going to undertake to check his  $\chi^2$  values which seem to me part of what is printed at author's risk.

Yours sincerely,
