

3rd. December 1949.

My dear Darlington,

After studying Lysenko's address to the Academy of Agricultural Sciences I do not see any point in reviewing it in a scientific journal, for really no point capable of scientific discussion has been raised. If you want to give space to it in Heredity, and of course the whole affair does concern geneticists nearly, what do you think of asking the

B.B.C., and later the authors, for permission to print their contributions in our journal?

Yours sincerely,
