

3rd. November 1949.

My dear Professor Darrois,

In view of the urgency felt at our last ISI meeting in respect of the election of new members, and the considerable reluctance of the plenary session to elect many more of our present list, I am putting up a number of new names, mostly in the fields of biometry and practical applications, which are at present very insufficiently represented in the Institute. Among these I think J. Wishart is known to you,

and I am enclosing the form of application, hoping you will
be inclined to complete it with your signature.

Yours sincerely,
