

April 1st, 1940

My dear Fox,

7 I was glad to have your letter of Good Friday. On the kind of point you raise I am most strongly influenced by the opinion of the author. If such summary tables as you suggest give the basis for all conclusions you wish to draw from the data, I should think they may be sufficient. For myself, as reader I think I always prefer the results of different experiments set out in full.

Yours sincerely,
